

Silo Weighing with SMS Monitoring

Get weight updates from anywhere in the world using SMS text messaging. Receive text alerts when the weight is over or under set weight limits or text the scale whenever you want to know its weight or status.

This unique solution enables users to send a standard text message from their mobile phone directly to the weight display and request its current weight. The system will send an automated reply with the current weight as well as time and date.

The system can also be setup with a minimum and maximum weight level trigger to send an SMS text alarm when the weight levels are reached. 1 to 4 scales can be controlled by the display and an optional relay can be used to trigger audible or visual alarms as required.

Benefit from cost savings, piece of mind, time savings, health & safety and the elimination of human error that can lead to stock shortages and delayed production.

The best solutions for all your
Weighing requirements
