

Takeaway Portion Control Software

In food production, it is important to ensure uniform portioning across a batch of product to guarantee value for money for the end user and reduce operator related waste costs. It is best to have a guide for operators instead of relying on the manual portioning estimation of the operator.

The takeaway portion control software is a great solution to this, it increases productivity and reduces 'give-aways'. It is suitable for multiple applications from a stand- alone scale or part on a complete system.

The best solutions for all your

Weighing requirements

Operator Performance Measurement

Possibility to see operators performance in easy and detailed way thanks to the detailed reporting module.

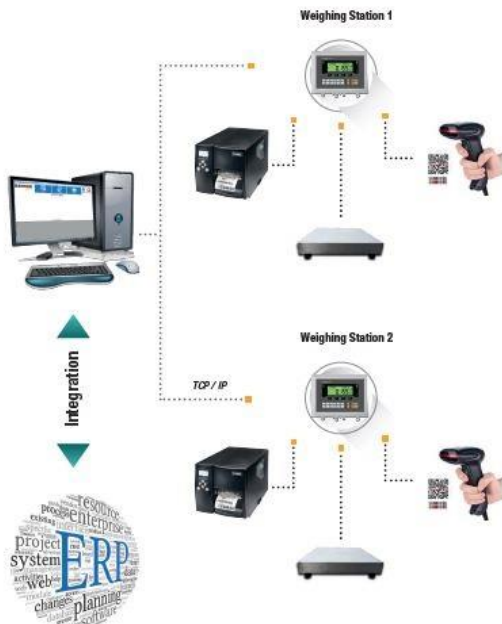

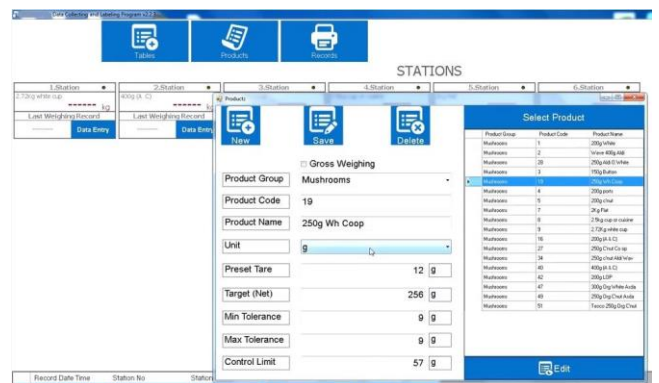

Statistical Reporting

Statistical reports including number of packages, number of faulty packages, average weight, standard deviation can be obtained shift, daily, between any 2 dates or batch based.

Station, User & Product Setups

Create your weigh stations, users and products to suit your requirements using the simple user interface.

Add or edit databases and view live data.

ERP Integration

Receiving product and operator information from ERP systems and transferring weighing results to ERP systems.

Monitoring from central computer

Weighing stations are active or passive
